Efficient disassembling & assembling and transportation

The equipment installation can be completed within 15 h in case of the superlift mode.
The basic machine transportation weight is 40 t, satisfying the global road transportation requirements.

Wider construction application

It is designed with 12 working modes, covering wind power, thermal power generation, petrochemical, shipbuilding, metro, water conservancy, etc.

Convenient and efficient disassembling & assembling, available for global transportation

The equipment can be disassembled, transited and assembled for construction within 2 days. With the upper and lower structure split technology, its max. transport weight of single part is 40 t, and the longest configuration for wind power application can be transported only with 30 vehicles.

New intelligent functions and improved safety control

With the new functions such as crane equipment management, statistical reports, maintenance, fault alarm, equipment positioning and track playback functions at the mobile APP terminal, the equipment management level and operation efficiency are improved.

New and comfortable operator's cab

Full field of view, large operation space, all-around A/C vents, and comfortable and cool interior temperature. The switches and buttons are arranged in a centralized way within the reach of the operator's hand, easy to operate.

Stronger lifting capacity

Leading comprehensive lifting performance. Customized for wind power applications.

High safety and dependability

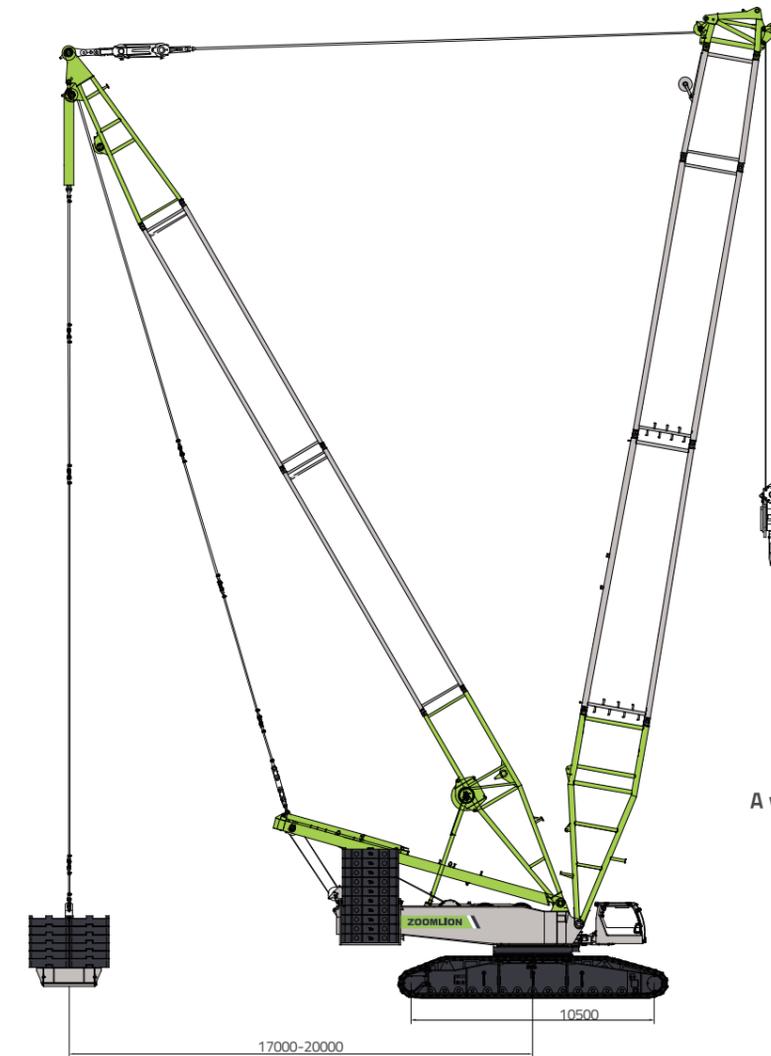

Imported configuration. Study on super long combined boom with multiple variable diameters. Multiple safety devices.

Comfortable control

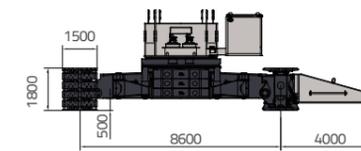

Spacious and comfortable, with broad field of view. The centralized arrangement of buttons brings accessible operation.

DIMENSIONS

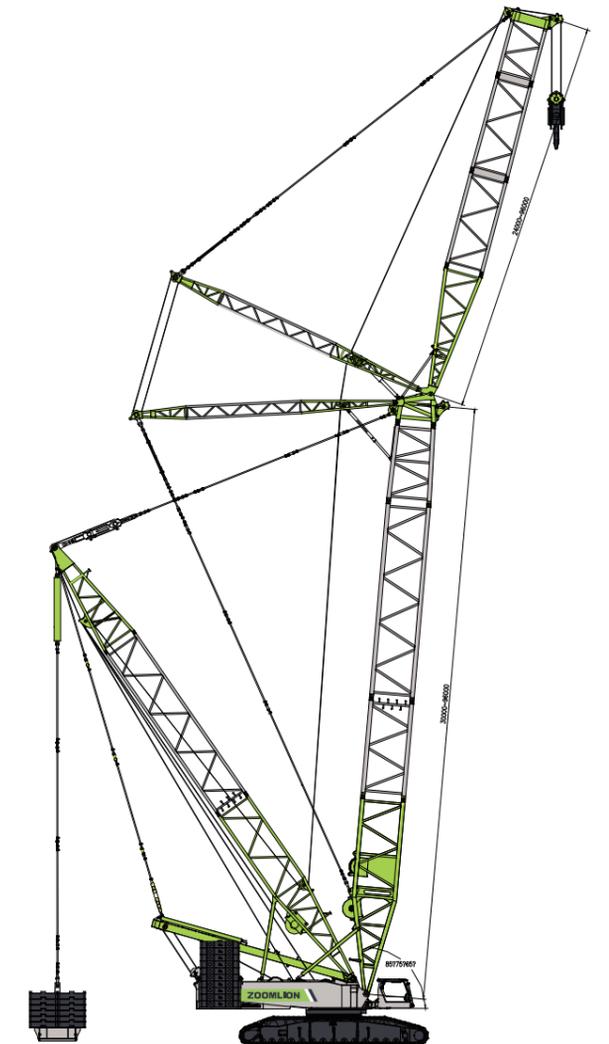

Basic machine with undercarriage

A view (crane with boom removed)

Overall dimensions of SWDB mode

MAIN TECHNICAL PARAMETERS

Item		Parameter
Max. load moment	t × m	9800
Main boom	Max. lifting capacity × radius t × m	600 × 7
	Heavy duty main boom m	39 ~ 93
	Light duty main boom m	72 ~ 114
Main boom + Superlift system	Max. lifting capacity × radius t × m	650 × 12 (300t Superlift) 800 × 8 (400t Superlift)
	Heavy duty main boom m	39 ~ 141
	Light duty main boom m	90 ~ 150
Superlift mast	Superlift mast length m	42
Wind power jib	Max. lifting capacity × radius t × m	160 × 17
	Wind power jib length m	7
	Main boom length m	90 ~ 114
Power boom + wind power jib + superlift system	Max. lifting capacity × radius t × m	160 × 24
	Wind power jib length m	7
	Main boom length m	108 ~ 159
Power Boom Booster + wind power jib + superlift system	Max. lifting capacity × radius t × m	160 × 26
	Wind power jib length m	7
	Main boom length m	147 ~ 171
Hoisting winch I、II	Wind speed (outermost layer)m/min	130
	Wire rope diameter mm	28
	Single rope tension KN	160
Aux hoisting winch	Wind speed (outermost layer)m/min	130
	Wire rope diameter mm	28
	Single rope tension KN	160
Main derricking winch	Wind speed (outermost layer)m/min	56 × 2
	Wire rope diameter mm	28
	Single rope tension KN	160

Item		Parameter
Superlift derricking winch	Wind speed (outermost layer)m/min	130
	Wire rope diameter mm	28
	Single rope tension KN	160
Slewing speed rpm		0~0.7
Traveling speed km/h		0.6/1.0
Gradeability %		30
Total crane weight (39M main boom,210t rear counterweight, 60t carbody counterweight, and 650t hook) t		520
Max. single component transportation weight t		40
Suspended Superlift counterweight t(superlift mast radius m)		300(Optional 400) (17、 20)
Rear counterweight t		190 (210)
Carbody counterweight t		60
Engine	Model	OM502LA.E3A/3
	Rated output power/speed kw/rpm	420/1800
	Rated torque Nm	2700/1300
Crawler gauge × Crawler length × Crawler width mm		8600 × 10500 × 1500

TECHNICAL DESCRIPTION

Engine

Engine type—Imported Benz electronic fuel injection engine with CAN bus interface
 Rated output power—420kw, 1800r/min
 Maximum output torque —2700 Nm/1300 rpm
 Fuel tank — 700 L
 Exhaust emissions —U.S. EPA Tier 3 and EU Stage III

Hydraulic system

The hydraulic system is composed of main pump, control valve, hydraulic motor, hydraulic oil tank, oil cooler and so on.

International advanced pump-control technology is applied in the hydraulic system.

Main hydraulic elements such as pump, motor and main control valve, imported from Germany, are energy-saving, reliable and long in service life.

Main hydraulic pump: variable displacement piston pump, driven by engine

The oil source of auxiliary mechanism is supplied by constant pressure pump and tandem gear pump.

Main control valve: pilot electro-hydraulic control valve

Main circuit is controlled by pump-control system and control levers.

Auxiliary mechanism is controlled by solenoid directional control valve block, which is fitted with an overflow valve.

The support cylinder is wireless remotely controlled.

Hydraulic oil tank — 940 L

Oil filter in hydraulic system: oil return line filter and fine filter for control oil line

Oil cooler for hydraulic system: an aluminium cooler and cooling fan driven by hydraulic motor

Hoisting winches 1 and 2

The hoisting winches 1 and 2 are composed of imported axial piston variable displacement motor, balance valve, reducer, normally closed brake as well as wire rope. And they are controllable independently. If two hoisting ropes are reeved on one load hook, winch synchronization is used to synchronize the hoisting winch 1 and hoisting winch 2, thus keeping the load hook in horizontal position all the time.

The hoisting rope is a kind of rotation resistant wire rope imported from Germany.

Both hoisting winches 1 and 2 have two kinds of hoisting speed, which can improve the working efficiency dramatically.

Winch	Rope diameter	Rope length	Single rope force	Rope speed on the outmost rope layer
Hoisting winch 1	28mm	1100m	16t	130m/min
Hoisting winch 2	28mm	1100m	16t	130m/min
Aux Hoisting winch	28mm	320m	16t	130m/min

Boom derricking winches

The Boom derricking winches are composed of imported axial piston constant motor, balance valve, reducer and normally closed brake as well as wire rope.

Normally closed brake is adopted to make boom winch work independently. The boom winches have self-lock function. When control lever is returned to neutral position, the winding drum of boom winch will be locked by the brake automatically.

There are two kinds of working radius for suspended ballast. When the crane is working with a light load, the suspended ballast can be lifted off the ground via a special adjusting device, thus allowing the crane to slew and move freely.

The derricking rope is a kind of rotation resistant wire rope imported from Germany.

Winch	Rope diameter	Rope length	Single rope force	Rope speed on the outmost rope layer
Main boom derricking winch	28mm	650m	16t	2X56 m/min
Superlift derricking winch	28mm	1480m	16t	130m/min

TECHNICAL DESCRIPTION

Swing

The slewing mechanism of closed oil circuit, driven by two slewing gears, is composed of built-in axial piston constant motor, gear reducer, brake and pinion gear as well as slewing ring. The slewing mechanism has controllable free swing function, which can reduce the impacts on the crane and ensure that the slewing movements can be initiated /stopped more stably. Imported 3-row roller type, external-gear slewing ring and slewing reducer are of strong load-carrying capacity and high precision, which can ensure stable and accurate slewing movements.

A mechanical locking device will be triggered to lock slewing mechanism during assembly, dismantling, and transportation of the crane.

infinitelyvariable Slewing speed -----0 - 0.7r/min.

Crawler

There are two hydraulic motors and two traveling reducers fitted in each traveling mechanism.

The hydraulic motors, traveling reducers and balance valves are all imported from Germany. Using control levers, the traveling movements can be controlled, such as traveling straight ahead/backwards, turning with a crawler, differential steering, turning on spot, and traveling with a load.

When the crane has traveled for 20m, its deviation is less than and equal to 25cm. Additionally, the crane has high maneuverability. There are three kinds of traveling speed for the crane: high speed, low speed and inching speed. Each speed can be infinitely adjusted to ensure stable traveling movements.

The track pads and track rollers are made of alloy steel, which meets the requirements in JB5318 standard.

Traveling speed -----0.6/1.0 km/h

Gradeability -----30%

Operator's cab

All-steel cab, which is spacious and comfortable, can be tilted and swiveled. The floor is covered with rubber plates, which are non-flammable and non-skid, and can not conduct the electricity. The noise level in the cab is less than 85dB.

The cab is equipped with control devices, detecting instruments and closed-circuit monitoring system. The LCD screens are adjustable, and have two kinds of visual modes: daylight mode and night mode. All instruments, LCD screens, switches and control levers are outfitted with indicating icons, operating instructions and work limit conditions.

The cab is also fitted with adjustable seat, DVD player, cooling & heating device, interphone, alarms, fire extinguisher and other safety devices.

The wiper, tricolor warning light and working floodlights are installed outside the cab.

Load hook

Rotatable load hook with safety catches:

800T load hook: 26 pulleys, used for crane operation with main boom

650T load hook: 24 pulleys, used for crane operation with main boom

400T load hook: 15 pulleys, used for crane operation with main boom

300T load hook: 12 pulleys, used for crane operation with Luffing jib

250T load hook: 12 pulleys, used for crane operation with Luffing jib

100T load hook: 4 pulleys, used for crane operation with fixed jib

50T load hook: 2 pulleys, used for crane operation with fixed jib

16T load hook: cylindrical load hook

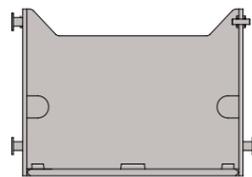

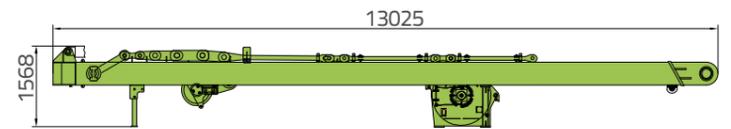

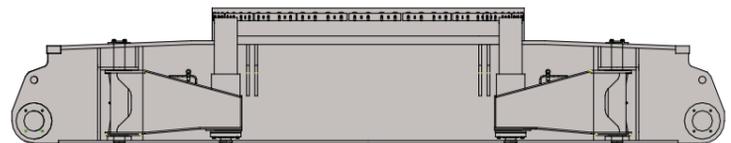

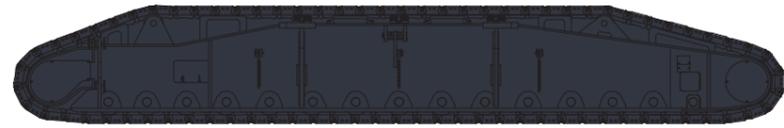

Operating weight

The operating weight includes the basic machine with crawlers,2 main winches including

wire ropes(1100m and 1100m) and 39m main boom, consisting of A-frame, 210t rear counterweight,60t carbody counterweight, and 650t hook block.

Total weight-----approx.520t
